Contents

1 Introduction **7**
- 1.1 Standard problem formulation . . . 7
- 1.2 Global and local minima . . . 8
- 1.3 Feasibility problem . . . 8
- 1.4 Example . . . 8
- 1.5 Classification of optimisation problems . . . 9
- 1.6 Classification of algorithms . . . 10
- 1.7 Hyperoptimisation . . . 11
- 1.8 Test functions . . . 11
  - 1.8.1 Multimodal test function . . . 12
  - 1.8.2 Unimodal test function . . . 12
- 1.9 Products . . . 13

2 Single-point, derivative-based algorithms **14**
- 2.1 Introduction . . . 14
  - 2.1.1 Classification . . . 14
  - 2.1.2 Gradient and Hessian of a function . . . 14
    - 2.1.2.1 Gradient . . . 14
    - 2.1.2.2 Hessian . . . 15
- 2.2 Newton's method . . . 16
- 2.3 Modified Newton's method . . . 17
- 2.4 Method of steepest descent . . . 18
- 2.5 Quasi-Newton methods . . . 20
  - 2.5.1 Secant method . . . 20
  - 2.5.2 Other methods . . . 20
- 2.6 Conjugate gradient method . . . 21
- 2.7 Conditions for optimality . . . 22

3 Single-point, derivative-free algorithms **25**
- 3.1 Random variables and stochastic processes . . . 25
  - 3.1.1 Selected random variables . . . 25
    - 3.1.1.1 Discrete uniform distribution . . . 25
    - 3.1.1.2 Continuous uniform distribution . . . 26
    - 3.1.1.3 Normal distribution . . . 26
    - 3.1.1.4 Lévy alpha-stable distribution . . . 27
  - 3.1.2 Selected stochastic processes . . . 28
    - 3.1.2.1 Wiener process . . . 28
    - 3.1.2.2 Lévy flight . . . 29

3.2 Random walk . . . 30
3.2.1 Uncontrolled random walk . . . 30
3.2.2 Domain controlled random walk . . . 31
3.2.3 Position controlled random walk . . . 32
3.3 Simulated annealing . . . 34
3.4 Random jumping . . . 36

4 Multi-point, derivative-free algorithms 37
4.1 Introduction . . . 37
4.1.1 (Meta)heuristic . . . 37
4.1.2 Nature-inspired algorithms . . . 37
4.2 Physics-based algorithms . . . 38
4.2.1 Gravitational search algorithm . . . 38
4.3 Bio-inspired algorithms . . . 41
4.3.1 Genetic algorithms . . . 41
4.3.1.1 Evolutionary algorithms . . . 41
4.3.1.2 Binary representation . . . 42
4.3.1.3 Floating-point representation . . . 43
4.3.2 Differential evolution . . . 47
4.3.3 Flower pollination algorithm . . . 49
4.4 Swarm intelligence based algorithms . . . 51
4.4.1 Particle swarm optimisation . . . 51
4.4.2 Accelerated particle swarm optimisation . . . 52
4.4.3 Firefly algorithm . . . 54
4.4.4 Bat algorithm . . . 57
4.4.5 Cuckoo search . . . 59

5 Constraints 62
5.1 Unconstrained and constrained optimisation . . . 62
5.2 Lagrange multipliers . . . 63
5.2.1 The method . . . 63
5.2.2 Equality constraints . . . 64
5.2.3 Inequality constraints . . . 66
5.2.4 Equality and inequality constraints . . . 68
5.2.5 Box constraints . . . 69
5.3 Penalty function method . . . 70
5.4 Barrier method . . . 71

6 Variational calculus 72
6.1 Functional and its variation . . . 72
6.1.1 Necessary condition for an extremum . . . 72
6.1.2 The Euler equation . . . 73
6.1.3 Constraints . . . 75
6.2 Classic problems . . . 75
6.2.1 Shortest path on a plane . . . 75
6.2.2 Brachistochrone . . . 76
6.2.3 Minimal surface of revolution . . . 78
6.2.4 Isoperimetric problem . . . 79
6.2.5 Geodesics . . . 81
6.2.6 Minimal surface passing through a closed curve in space . . . 83
6.2.7 Variational formulation of elliptic partial differential equations . . . 84

6.3 Variational method of finding streamlines in ring cascades for creeping flows . 85
6.3.1 Introduction . . . 85
6.3.2 Conservation equation in curvilinear coordinate systems . . . 85
6.3.3 Dissipation function and dissipation power . . . 86
6.3.4 Analytical solutions . . . 86
6.3.5 Dissipation functional . . . 87
6.3.6 Dissipation functional vs. equations of motion . . . 88
6.3.7 Streamlines . . . 89
6.3.7.1 Both ends constrained . . . 89
6.3.7.2 One end partly constrained . . . 90
6.3.7.3 One end unconstrained . . . 91
6.3.8 Summary . . . 92
6.4 Minimum drag shape bodies moving in inviscid fluid . . . 92
6.4.1 Problem formulation . . . 92
6.4.2 Fluid Resistance . . . 93
6.4.2.1 Drag force . . . 93
6.4.2.2 Pressure coefficients and its approximation . . . 93
6.4.3 Two-dimensional problem . . . 94
6.4.4 Three-dimensional problem . . . 95
6.4.4.1 Functional and Euler equation . . . 95
6.4.4.2 Exact pseudo solution . . . 96
6.4.4.3 Approximate solution due to the functional . . . 96
6.4.4.4 Approximate solution due to form of the function . . . 96
6.4.4.5 Approximate solution by means of a Bézier curve . . . 97
6.4.5 Summary . . . 98

7 Multi-objective optimisation 100
7.1 Definitions . . . 100
7.2 Domination . . . 100
7.2.1 The Pareto set . . . 101
7.2.2 The Pareto front . . . 101
7.3 Scalarisation . . . 101
7.3.1 Method of weighted-sum . . . 101
7.3.2 Method of target vector . . . 102
7.3.3 Method of minimax . . . 102
7.4 SPEA . . . 102
7.5 Examples . . . 103
7.5.1 Two objective fitness functions of a single variable . . . 103
7.5.1.1 Analytical solution . . . 104
7.5.1.2 Single objective reconstruction of Pareto set . . . 104
7.5.1.3 Multi-objective SPEA . . . 104
7.5.2 Two objective fitness functions of two variables . . . 104
7.5.2.1 Analytical solution . . . 106
7.5.2.2 Single objective reconstruction of Pareto set . . . 107
7.5.2.3 Multi-objective SPEA . . . 107
7.6 Multi-objective description of Murray's law . . . 109
7.6.1 Introduction . . . 109
7.6.2 Multi-objective description . . . 110

8 Statistical analysis **113**
8.1 Distributions . . . 113
8.2 Discrepancy . . . 115
8.3 Single-problem statistical analysis . . . 115
8.4 Multiple-problem statistical analysis . . . 173
8.4.1 $D = 2$, 100 evaluations . . . 174
8.4.2 $D = 2$, 400 evaluations . . . 175
8.4.3 $D = 2$, 2000 evaluations . . . 176
8.4.4 $D = 10$, 10^4 evaluations . . . 177

Bibliography **178**

A Codes **181**
A.1 Single-point, derivative-free algorithms . . . 181
A.2 Multi-point, derivative-free algorithms . . . 184
A.3 Miscellaneous . . . 193

B AGA – Advanced Genetic Algorithm **194**
B.1 Brief introduction . . . 194
B.2 Detailed introduction . . . 195
B.3 I/O Console . . . 203
B.4 Script writing . . . 208
